

To whom it may concern,

It is with great pleasure that I write this letter of recommendation for Glenn Gordon for engineering positions that demand creativity and innovation. Glenn worked in my Engineering and Product Development Department at Cummins-Allison for 15+ years. He began as an Engineer, working in the Coin Products group. He quickly was recognized for his skills as an Engineer but mostly for his innovative and creative mind.

During his tenure I had the pleasure of working directly with Glenn on the development of solutions to challenging problems and purposely challenged Glenn with our toughest problems due to his history of excellent engineering skill, logical thinking and creative solutions to problems. He consistently approaches his work with passion and a natural curiosity that results in truly outstanding work.

Over the years I have learned of his abilities outside of his employment. His passion for flying and hands-on ability to build aircraft and innovation in aviation has been nothing short of impressive and amazing. When he expressed his desire to move to California to build a house on a landing strip I immediately thought the loss of his skills in my team. We ended up solving the problem by setting him up remotely, something we have not done before. I can say the move was seamless and Glenn has continued to deliver, working around any natural barriers of working remote. In some ways his being remote has enhanced his productivity since there is little to interrupt him, enhancing his focus.

In closing, let me say I have no hesitation in recommending Glenn for any position requiring outstanding engineering skills, a creative mind and a passion to succeed. Glenn will not disappoint and will be a real asset to your team. If you have any questions or I can be of further assistance please contact me at jrblake60@comcast.net.

Warm Regards,

John Blake
